

Lab Cycle 2

- 1) Write a PL/SQL code to accept the text and reverse the given text. Check the text is palindrome or not.

PROGRAM CODE

```
DECLARE
s VARCHAR2(10) := 'abccba';
l VARCHAR2(20);
t VARCHAR2(10);
BEGIN
FOR i IN REVERSE 1..Length(s) LOOP
l := Substr(s, i, 1);
t := t||l;
END LOOP;
IF t = s THEN
dbms_output.Put_line(t || ' is palindrome');
ELSE
dbms_output.Put_line(t || ' is not palindrome');
END IF;
END;
```

OUTPUT

```
SQL> @q1.sql
16 /
abccba is palindrome

PL/SQL procedure successfully completed.
```

- 2) Write a program to read two numbers; If the first no > 2nd no, then swap the numbers; if the first number is an odd number, then find its cube; if first no < 2nd no then raise it to its power; if both the numbers are equal, then find its sqrt.

PROGRAM CODE

```
DECLARE
a INTEGER:=12;
b INTEGER:=9;
temp INTEGER:=0;
c INTEGER;
cube INTEGER;
BEGIN
IF a > b THEN
temp:=a;
a:=b;
b:=temp;
DBMS_OUTPUT.PUT_LINE('After swapping the a value is '||a||' and b value is '||b);
IF MOD(b,2) !=0 THEN
cube:=a * a * a;
DBMS_OUTPUT.PUT_LINE('Cube is :'||cube);
ELSE
DBMS_OUTPUT.PUT_LINE('first number is even');
END IF;
ELSIF a < b THEN
c:=a **b;
DBMS_OUTPUT.PUT_LINE('Power is :'||c);
ELSIF a=b THEN
DBMS_OUTPUT.PUT_LINE('Square root of a is :'||(SQRT(a)));
DBMS_OUTPUT.PUT_LINE('Square root of b is :'||(SQRT(b)));
END IF;
END;
```

OUTPUT

```
SQL> @q2.sql
27 /
After swapping the a value is 9 and b value is 12
first number is even

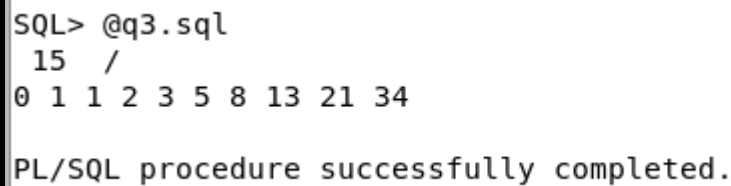

PL/SQL procedure successfully completed.
```

3)Write a program to generate first 10 terms of the Fibonacci series

PROGRAM CODE

```
DECLARE
a NUMBER:=0;
b NUMBER:=1;
c NUMBER;
BEGIN
DBMS_OUTPUT.PUT(a||"||B||");
FOR I IN 3..10 LOOP
c:=a+b;
DBMS_OUTPUT.PUT(c||");
a:=b;
b:=c;
END LOOP;
DBMS_OUTPUT.PUT_LINE("");
END;
```

OUTPUT

A screenshot of a SQL command window showing the execution of a PL/SQL program. The output displays the Fibonacci sequence: 0 1 1 2 3 5 8 13 21 34. The prompt 'SQL>' is followed by '@q3.sql'. Below the sequence, the text 'PL/SQL procedure successfully completed.' is shown.

```
SQL> @q3.sql
15 /
0 1 1 2 3 5 8 13 21 34

PL/SQL procedure successfully completed.
```

4) Write a PL/SQL program to find the salary of an employee in the EMP table (Get the empno from the user). Find the employee drawing minimum salary. If the minimum salary is less than 7500, then give an increment of 15%. Also create an emp %rowtype record. Accept the empno from the user, and display all the information about the employee.

PROGRAM CODE

```
create table employee(emp_no int,emp_name varchar(20),emp_post
varchar(20),emp_salary decimal(10,2));

insert into employee values(103,'Rahul','MD',25000);

insert into employee values(105,'Ravi','HR',20000);

insert into employee values(107,'Rani','Accountant',15000);

insert into employee values(109,'Rema','Clerk',10000);
```

```
insert into employee values(201,'Ramu','Peon',5000);

Declare

emno employee.emp_no%type;

salary employee.emp_salary%type;

emp_rec employee%rowtype;

begin

emno:=109;

select emp_salary into salary from employee where emp_no=emno;

if salary<7500 then

update employee set emp_salary=emp_salary * 15/100 where

emp_no=emno;

else

dbms_output.put_line('No more increment');

end if;

select * into emp_rec from employee where emp_no=emno;

dbms_output.put_line('Employee num: '||emp_rec.emp_no);

dbms_output.put_line('Employee name: '||emp_rec.emp_name);

dbms_output.put_line('Employee post: '||emp_rec.emp_post);

dbms_output.put_line('Employee salary: '||emp_rec.emp_salary);

end;
```

output

```
SQL> @q41.sql
Table created.

1 row created.

1 row created.

1 row created.

1 row created.

1 row created.
```

```
SQL> @q42.sql
20 /
No more increment
Employee num: 109
Employee name: Rema
Employee post: Clerk
Employee salary: 10000

PL/SQL procedure successfully completed.
```

5) Write a PL/SQL function to find the total strength of students present in different classes of the MCA department using the table Class(ClassId, ClassName, Strength);

PROGRAM CODE

```
create table class(cls_id int,cls_name varchar(20),cls_std int);
```

```
insert into class values(201,'mca',60);
```

```
insert into class values(202,'mca',60);
```

```
insert into class values(203,'bca',57);
```

```
insert into class values(204,'bca',59);
```

```
insert into class values(205,'msc',62);
```

```
CREATE OR REPLACE FUNCTION total_std
```

```
RETURN NUMBER IS
```

```
total NUMBER(5):=0;
```

```
BEGIN
```

```
SELECT sum(cls_std) INTO total FROM class WHERE cls_name='mca';
```

```
RETURN total;
```

```
END;
```

```
DECLARE
```

```
c NUMBER(5);
```

```
BEGIN
```

```
c:=total_std();
```

```
DBMS_OUTPUT.PUT_LINE('Total students in MCA department is:'||c);
```

```
END;
```

Output

```
SQL> @q51.sql  
Table created.  
  
1 row created.  
  
1 row created.  
  
1 row created.  
  
1 row created.  
  
1 row created.
```

```
SQL> @q52.sql

Function created.
```

```
SQL> @q53.sql  
7 /  
Total students in MCA department is:120  
  
PL/SQL procedure successfully completed.
```

- 6) Write a PL/SQL **procedure** to increase the salary for the specified employee. Using empno in the employee table based on the following criteria: increase the salary by 5% for clerks, 7% for salesman, 10% for analyst and 20 % for manager. Activate using PL/SQL block.

PROGRAM CODE

```
create table emp(emp_no int,emp_name varchar(20),salary int,emp_dpt  
varchar(20));
```

```
insert into emp values(101,'arun',50000,'salesman');
insert into emp values(102,'appu',6500,'manager');
insert into emp values(103,'ammu',7500,'clerk');
insert into emp values(104,'anitha',7500,'analyst');
```

```
CREATE OR REPLACE PROCEDURE increSalary
IS
emp1 emp%rowtype;
sal emp.salary%type;
dpt emp.emp_dpt%type;
BEGIN
SELECT salary,emp_dpt INTO sal,dpt FROM emp WHERE emp_no = 104;
  IF dpt ='clerk' THEN
    UPDATE emp SET salary = salary+salary* 5/100 ;
  ELSIF dpt = 'salesman' THEN
    UPDATE emp SET salary = salary+salary* 7/100 ;
  ELSIF dpt = 'analyst' THEN
    UPDATE emp SET salary = salary+salary* 10/100 ;
  ELSIF dpt = 'manager' THEN
    UPDATE emp SET salary = salary+salary* 20/100 ;
  ELSE
    DBMS_OUTPUT.PUT_LINE ('NO INCREMENT');
  END IF;
  SELECT * into emp1 FROM emp WHERE emp_no = 104;
  DBMS_OUTPUT.PUT_LINE ('Name: '||emp1.emp_name);
  DBMS_OUTPUT.PUT_LINE ('employee number: '||emp1.emp_no);
  DBMS_OUTPUT.PUT_LINE ('salary: '|| emp1.salary);
  DBMS_OUTPUT.PUT_LINE ('department: '|| emp1.emp_dpt);
END;

DECLARE
BEGIN
  increSalary();
END;
```

Output

```

department: analyst

PL/SQL procedure successfully completed.

```

- 7) Create a **cursor** to modify the salary of 'president' belonging to all departments by 50%

PROGRAM CODE

```

create table emp(emp_no int,emp_name varchar(20),salary int,emp_dpt
varchar(20),dsgt varchar(20));
insert into emp values(101,'arun',50000,'sales','president');
insert into emp values(102,'appu',6500,'Ac','president');
insert into emp values(103,'ammu',7500,'HR','manager');
insert into emp values(104,'anitha',7500,'Ac','snr grade');
insert into emp values(105,'anitha.c',7500,'HR','president');

```

DECLARE

```

total_rows number(2);
emp1 EMP%rowtype;
BEGIN

UPDATE emp SET salary = salary + salary * 50/100 where dsgt = 'president';
IF sql%notfound THEN
dbms_output.put_line('no employee salary updated');
ELSIF sql%found THEN
total_rows := sql%rowcount;
dbms_output.put_line( total_rows || ' employee salary details updated');
end if;
end;

```

output
